

New and Better insights into Open Science

Chicago 6 October 2019
Bo Alroe, Director of Strategy

Taking new approaches
with new data from
Dimensions

Part of **DIGITAL**science

The dawning of the era
of context?

Eras of research management

Research eras

- Era of Discovery (1950s - late 1990s)
 - Era of Metrics (early 2000s - now)
 - Era of Context (dawning)
- Unaffected by evaluation, classic library use-cases
 - Evaluation, assessment, ranking optimisation
 - Data to *inform* (not drive) decisions

"The five levels of scholarly search"

Daniel W. Hook, 2019

A brief history of the needs of scholars (WIP)

E.g. **discover** primary research to be up-to-date on the state of the art, knowing what to cite, seeing who in the community is engaging in which kind of research, who to contact to discuss a specific problem, etc.

Metrics are blunt tools (DORA, the Leiden Manifesto, the Metric Tide).

Users prefer visualisation or graphs over a single number. They want a search result but also to **contextualise** it to make the right interpretation. They want to drill down but also to be drawn across data (e.g. interactive visualisations), and complex narratives are valued, not reduced, in pursuit of understanding.

The Era of Metrics was the time of **reductionism** and the belief that data should drive rather than support decisions. The Era of Metrics is the era of the H-Index

Search tools reflect their eras

| Level | Era | Pricing Model | Example | Search type | Data | Content inclusion | Citation graph | Analytics |
|-------|-----------|---------------|-------------------------|---------------|--|-------------------|---|-----------------|
| 1 | Discovery | Free | PubMed | Metadata only | Publications | Limited | Limited | - |
| 2 | Discovery | Subscription | Primo, Summon, WorldCat | Metadata only | Publications | Inclusive | Limited | - |
| 3 | Metrics | Subscription | Web of Science, Scopus | Metadata only | Publications, Patents, Data | Curated | Publications | InCites, SciVal |
| 4 | Metrics | Free | Google Scholar | Full Text | Publications | Inclusive | Publications | - |
| 5 | Context | Freemium | Dimensions | Full Text | Publications, Patents, Grants, Clinical Trials, Policy Documents, Datasets | Inclusive | Fully linked graph at object level + altmetrics | Integrated |

Abstract

The National Institute on Aging and the Alzheimer's Association charged a workgroup with the task of revising the 1984 criteria for Alzheimer's disease (AD) dementia. The workgroup sought to ensure that the revised criteria would be flexible enough to be used by both general healthcare providers without access to neuropsychological testing, advanced imaging, and cerebrospinal fluid measures, and specialized investigators involved in research or in clinical trial studies who would have these tools available. We present criteria for all-cause dementia and for AD dementia. We retained the general framework of probable AD dementia from the 1984 criteria. On the basis of the past 27 years of experience, we made several changes in the clinical criteria for the diagnosis. We also retained the term possible AD dementia, but redefined it in a manner more focused than before. Biomarker evidence was also integrated into the diagnostic formulations for probable and

Background

Part of **DIGITAL**science

What prompted us to develop Dimensions?

Six Digital Science companies worked together

We worked with 100+ global development partners

Our partners offered important insights:

- Actual needs in research discovery, administration, and management
- Needs within different disciplines
- Regional differences
- Best practises

The ambitions for Dimensions - created with those partners

- Better context for scholarly work
- As free + open as possible
- Full text search
- Modern application + integrated analyses + API
- Fast access to read full text
- Inclusive approach to data (no exclusion of low-cited work)
- Editorial process against predatory/fraudulent journals
- Give users tools to decide what's relevant
- Interlinked data

Create value, realise
innovative approaches on
many levels, starting with
the basics!

Key aspects we wanted to change

Citation data: High costs,
limited use only!

... available for researchers
at no cost, fair costs for institutions!

Simplistic metric driven
impact assessment

Multiple metrics (developed by the
community) and richer context

Data monopoly
blocks innovation

... data is a commodity, full
innovation potential of the research
community is enabled

Data in Dimensions

What Digital Science already had on the shelves ...

Publications (1/2) - Publication metadata backbone

PUBLICATIONS

- Journal articles, pre-prints and books/chapters
- 100M + records based on metadata
- Metadata and citations derived from multiple available databases
- OA tagging
- Rule-based document type identification

JOURNALS / BOOKS

PRE-PRINT / OA

Pipeline 2019/20

Publications (2/2) - Full text processing

PUBLICATIONS

- Full text for 70M+ publications currently
- Direct relationships with >130 publishers
- Increased discoverability through
 - Full text index
 - Openly available discovery interface
- Highly contextualised
 - Related grants, publication references, related trials, related patents, related policy documents
 - Improved representation compared to the 'backbone' records

| | | | | | |
|---|---|---|---|---|---|
|  |  |  |  |  |  |

|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  | and 90+ other publishers |

The metrics in Dimensions - close to the data

I4OC citations + own reference extraction

...with an invitation to the bibliometric community to do research on innovative metrics on the Dimensions data and tool platform since Digital Science does not want to impose new metrics

* planned for future release

Grants data

GRANTS

- Project funding
- 5M grants from +430 funders globally
- \$1.5 trillion of funding
- Sourcing
 - Direct relationships with funders
 - Data available via APIs
 - Data available via websites which we crawl

The screenshot shows the Dimensions website interface. The left sidebar contains navigation links under 'MY ACCOUNT' and 'ABOUT DIMENSIONS'. The main content area is titled 'About the grants data' and includes a paragraph explaining the data update process. Below this is a table listing various funders, their GRID IDs, and their countries.

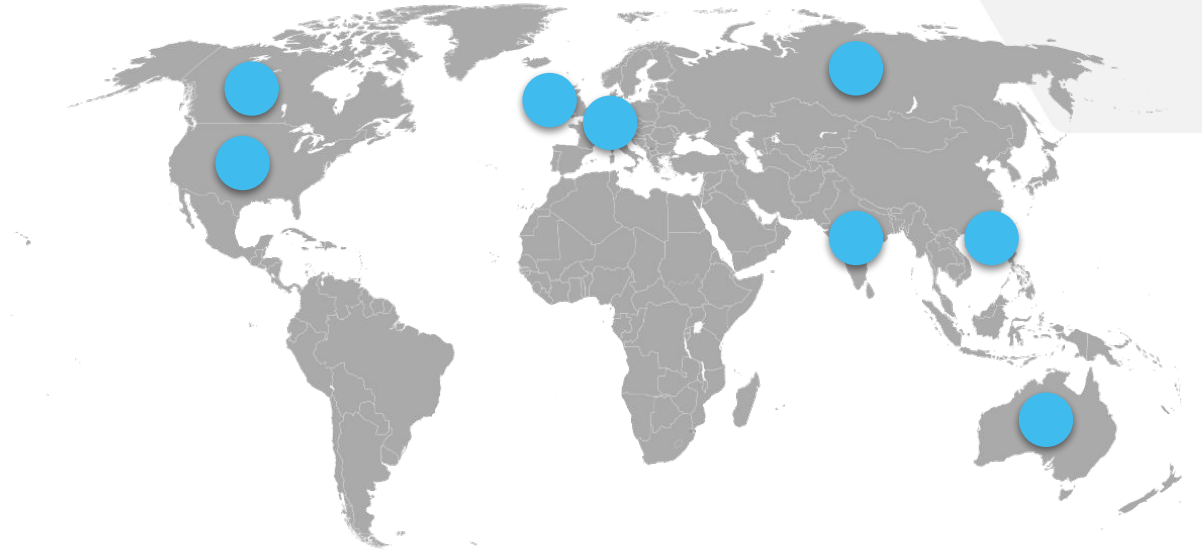

| Funder | GRID ID | Country |
|--|-------------------------------|---------------|
| Japan Society for the Promotion of Science (JSPS) | grid.54432.34 | Japan |
| National Natural Science Foundation of China (NSFC) | grid.419696.5 | China |

The point?

Money matters in research. Without that context, some analyses become very one-legged.

Who owns Japan's patents?

Top-10 Japan corporations by patent volume 2019-2030

Top-10 patented fields (FOR) by volume with top-15 Japan patent assignees 2010-2019

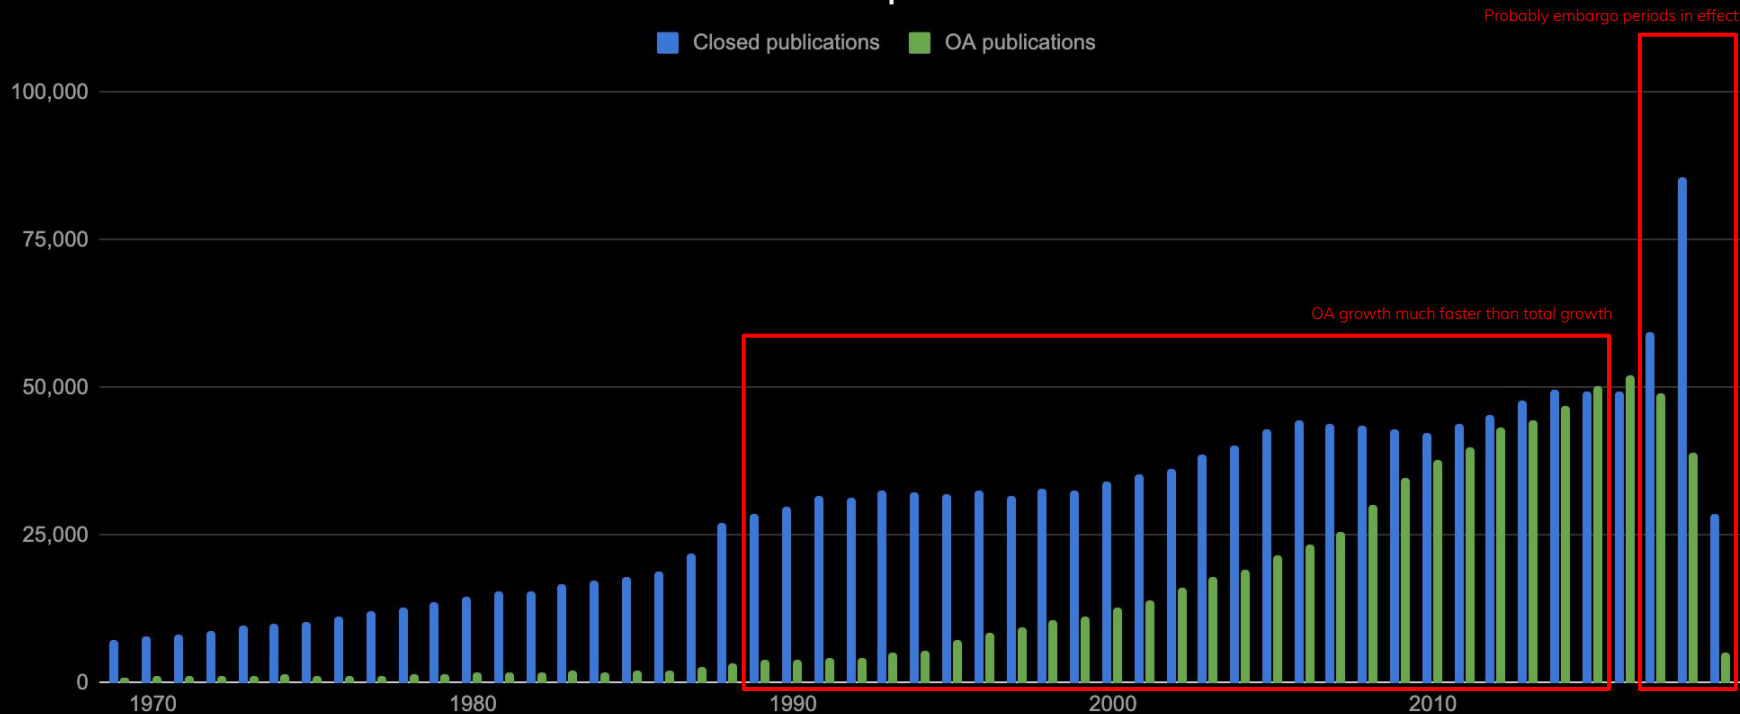

The point?

Comparing your strong fields with **corporate patent fields** can help your university find opportunities for corporate collaboration and tech transfer.

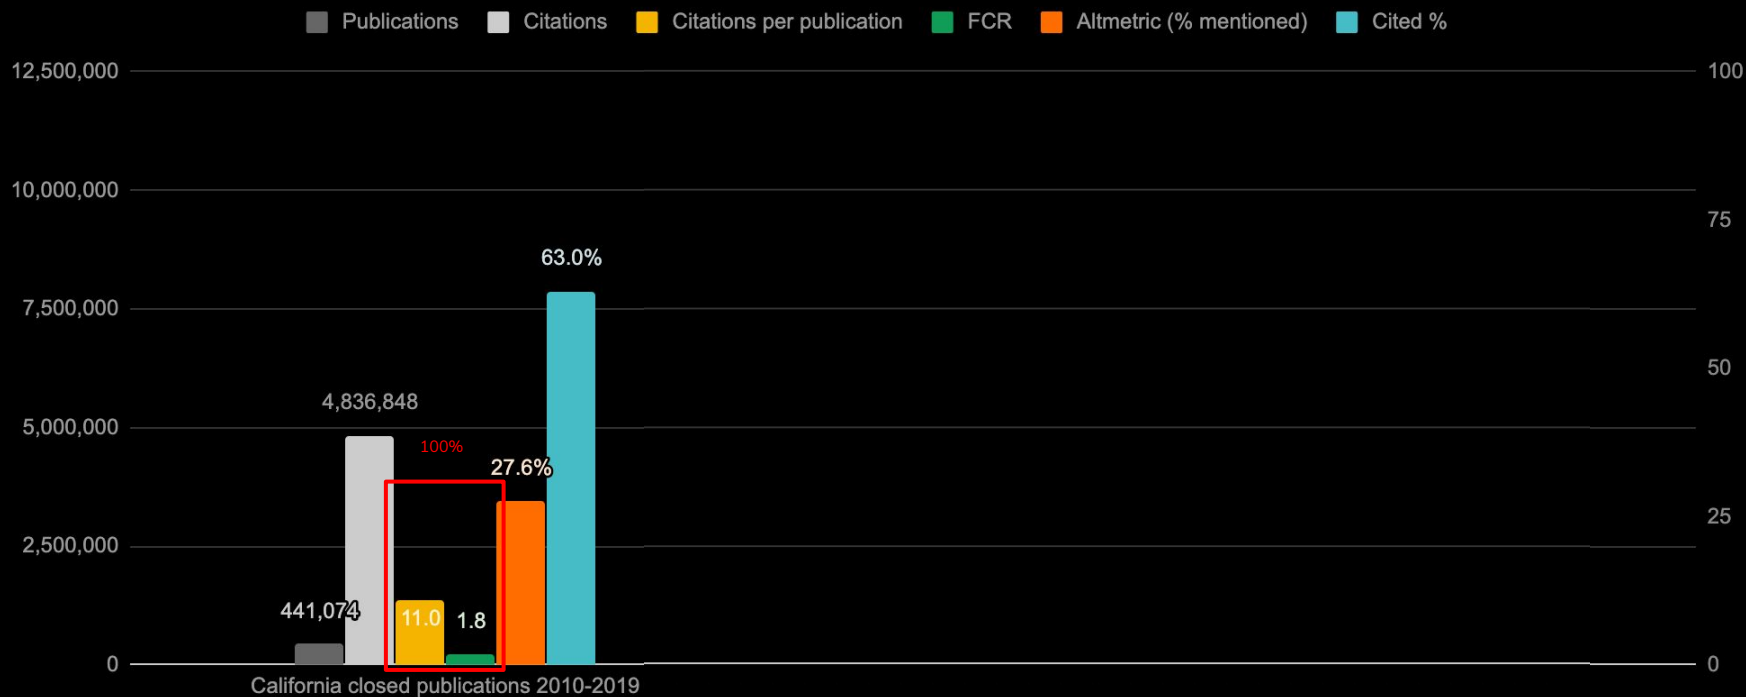

Closed vs. OA in California since 1969

California closed vs. OA publications 1969-2019

Let's look at impact and attention

California closed vs. OA overview 2010-2019

Lost funder-ROI (measured by impact)

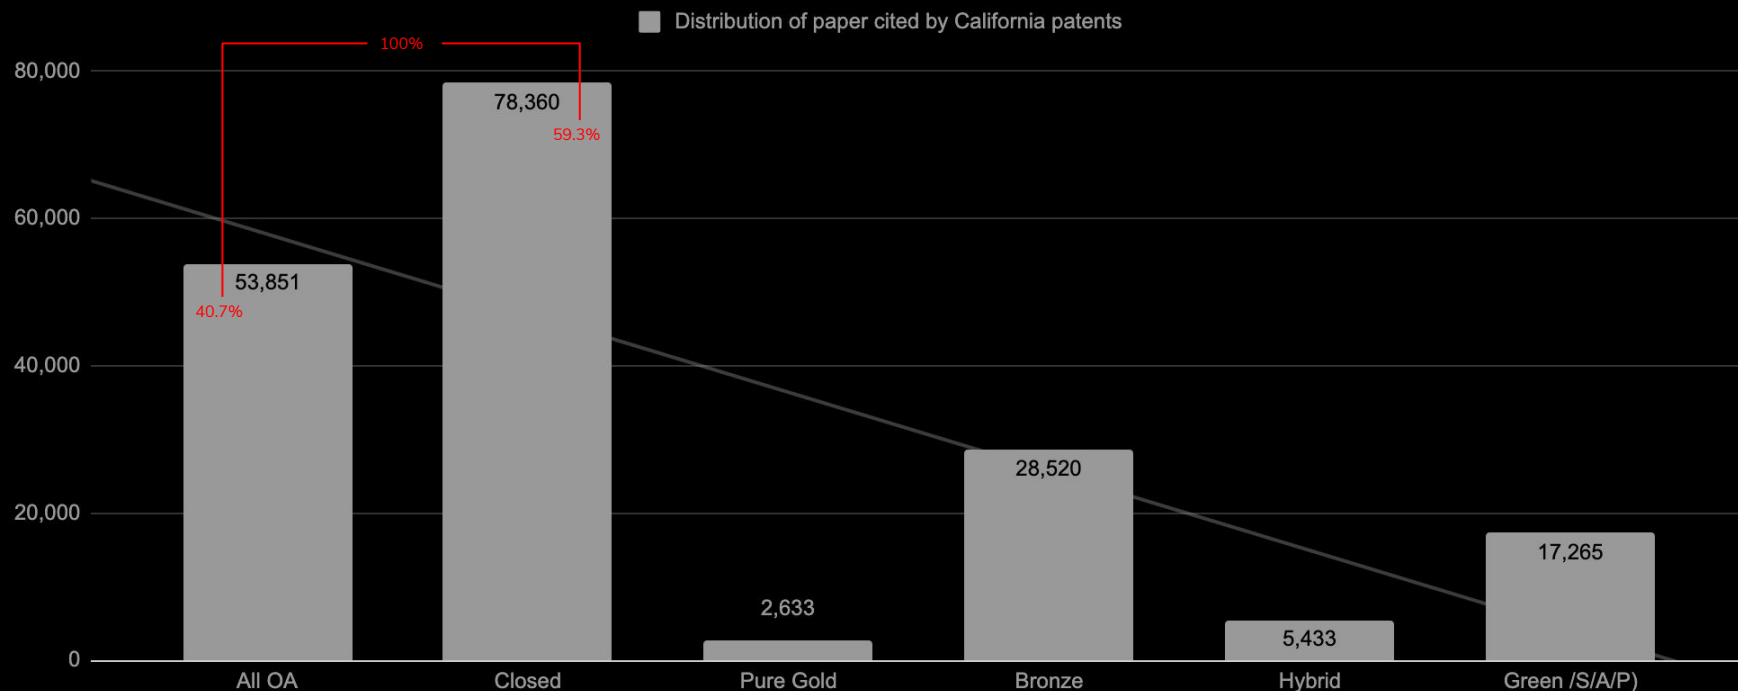

Closed Elsevier-published UC-pubs. with acknowledgements to UC's top-10 domestic funders 2010-2019

Lost or delayed tech-transfer opportunities

Distribution of publications cited by California-held patents 2014-2019 closed vs. OA

Lost or delayed tech-transfer opportunities

Developments in the top-5 fields of California patents 2010-2019 that cite publications

The point?

Open Access matters. Rich context helps us better understand how.
